LIMITLESS POSSIBILITIES

LAMMHULTS

AWARD-WINNING TABLES
SERIES ATTACH, DESIGNED BY
TROELS GRUM-SCHWENSEN,
OFFERS A WIDE RANGE
OF POSSIBILITIES.

ATTACH

DESIGN TROELS GRUM-SCHWENSEN, 2016, 2017

Basically, the Attach frame consists of two parts: A beam in extruded aluminum and a casted leg. The user can just attach the leg to the beam by hand, using no tool, and the gravity will lock and stabilize the table-construction, when it stands.

The goal behind this idea has, from the beginning of the design-process, been to optimize the degree of freedom for the end-user and interior-planner. The aim was to offer this freedom and adaptability, not by having a lot of different parts, but by carefully adjusted simplicity and innovative exploiting of gravity.

FREEDOM IN WIDTH

On all rectangular tables, there are only two longitudinal beams. More than giving an airy expression, this also enables a huge span in table-widths.

ATTACH

FREEDOM IN LENGTH

The triangular aluminum-beam of Attach is strong enough to make a span on up to 3 metres between legs - which is also the approximately maximum length of a table top. Longer tables can be made, by using a special-developed connection-part, which allows adding more beams to each other, without losing strength.

DIFFERENT SHAPES & HEIGHTS

The simplicity of the ingenious construction of the Attach table series, allows many different shapes and materials of table tops, using only the same two basic elements; the beam and the leg. Attach is available in height 74 and 90 cm.

4-legged circular and square tables can be made with square frames.

3-legged tables can be made with hexagonal frames.

THE OUTDOOR CHOICE

Using the same clever design with the extruded aluminum beams and attachable legs of cast aluminum in combination with a table top of wooden slats, Attach becomes the perfect choice for the office atrium, home garden or outdoor café.

Choose between natural or dark oiled Accoya, a low maintenance material. Attach Outdoor is available in height 74 and 90 cm in three different widths and several lengths between 165 cm up to 315 cm.
