Testing of Campus armchair (1 appendix)

1 Introduction

By commission of Lammhults Möbel AB, a Campus armchair has been tested by SP in accordance with Möbelfakta requirement specification 4.2.1 Seating furniture for public locations, issue 0202.

2 Test specimen

Frame: Steel tube Ø16 mm.
Seat/backrest: Compression-moulded veneer.
Armrest: Compression-moulded veneer.

The test specimen was selected by the customer and arrived at SP on April 18, 2006.

3 Test methods and test procedure

Before testing the test specimen was not conditioned for one week in a climate of 23°C ± 2°C and 50% ± 5% relative humidity, in accordance with the standards. Testing was carried out in this climate.

The test methods are explained in Appendix 1 in accordance with Möbelfakta requirement 4.2.1 Seating furniture for public locations, issue 0202.

The test was carried out between April 18 and May 3, 2006.

Laboratories are accredited by the Swedish Board for Accreditation and Conformity Assessment (SWEDAC) under the terms of Swedish legislation. This report may not be reproduced other than in full, except with the prior written approval of the issuing laboratory.

4 Results

The result is reported in Appendix 1.

At the end of the test, the tested piece did not exhibit any faults, fractures or other damage judged to affect its safety when used in accordance with SS-ENV 12520. The requirement has been met.

At the end of the test, the tested piece did not exhibit any damage or deformation which is expected to affect its function or appearance.

The test results apply solely to the specimen tested.

- 1) When assessing the test results the "Criteria of defects" accordance with "Strength and durability (function)", below, shall also be considered.
 2) The requirement is given by Möbelfakta as no requirement is given in other standards e.g. CEN- or ISO standards
 The extent and requirements are adapted to SS-EN 13761: Office furniture – Visitors chairs.

√ The test has been completed without any remarks

* In clause , the force has been reduced to N in accordance with the standard

⊗ The requirement is not fulfilled

Assessment of results

Safety:

After carrying out the tests, the tested piece of furniture did not demonstrate any ruptures, fractures or other damage that can affect the safe use of the article as per SS-ENV 12520. This also implies that after the testing there are no burrs, sharp edges or sharp points. See clause 1.1.

Strength and durability (performance):

After carrying out the tests the tested piece of furniture did not demonstrate any ruptures, fractures or other damage that can affect the durability or appearance as:

- Fracture of any member, component or joint.
- Loosening of any joint intended to be rigid.
- Deformation or wear of any part or component such that it's functioning is affected.
- Loosening of any means of fixing components.
- Any movable parts that no longer open or close freely, or catches that do not operate properly.
- Clearly audible noise.
- The height change of upholstery.

When tested according to clause 3.8 or 3.9 alternatively the height change of the seat shall not exceed 25 mm.

Assessment of the height change shall be carried out according to the method described in prEN 14443: Domestic furniture – Seating – Test methods for the determination if durability of upholstery
